## Management Comments

The weak performance of the Brazilian economy in the second quarter of 2014 reflects, among other aspects, the erosion in the purchasing power of the population caused by inflation indices hovering near the ceiling of the target, the slowdown in the growth of the real wage bill, the downturn in the credit market due to the hike in interest rates on loans to households and the sharp decline in the consumer confidence index. Another defining factor for sluggish economic activity is the fewer business days in June on account of the World Cup, which affected both retail and business in general.

Indicators of activity in the main markets in which the Company operates reflect this scenario. According to the Brazilian construction materials industry association (ABRAMAT), the sector registered a $4.6 \%$ decline in the first half of 2014 in relation to the same period the previous year. Domestic panel sales declined $3.7 \%$ in the period, according to the Brazilian panel manufacturers association (ABIPA).

The outlook for the coming months is of a rebuilding of stocks across the supply chain and of a slight recovery in the construction sector, since these markets are traditionally impacted positively by the seasonal factor in the second half of the year. However, it is difficult to determine if this will indeed happen, since the main drivers of the company's business have been deteriorating, as mentioned earlier.

## 2Q14 Earnings Release

The Company has obtained positive results in its cost-cutting initiatives and has also implemented several projects, which should result in more significant reductions than in the first half of 2014. Moreover, the economic slowdown has provided the Company with opportunities to reduce costs in a few of its raw materials, especially resin.

## Operating Performance and Results

In the Wood segment, the Company's domestic sales and exports in 2Q14 were $6.6 \%$ lower than in 2Q13, while the market registered an $8.1 \%$ decrease, according to data from ABIPA. The decrease in sales in the Wood segment was lower than reported by ABIPA because the Company waited for the market to react and sought to maintain its margin levels. However, at the end of the quarter, supplies increased sharply in a few product families at the expense of prices.

Paint sales decreased $12.0 \%$ in the quarter due to adjustments in the stock levels at a few major customers, which was an isolated and non-recurring phenomenon. Paint sales in 1H14 were 1.5\% lower than in the same period the previous year, which was still better than the $1.9 \%$ decline in overall paint market sales during the period, according to the Brazilian paint manufacturers association (ABRAFATI).

| :--- | ---: | ---: | ---: | ---: | ---: | ---: |

Net revenue totaled R\$ 255.0 million (R\$ 279.5 million in 2Q13). In relation to 1 H 13 , the Paint segment was the top performer with a $7.4 \%$ increase in revenues on account of the increase in prices.

## Cost of Goods Sold (COGS)

The 2.5\% decrease in COGS in the quarter reflects the year-on-year decrease in the prices of a few key raw materials, especially urea formaldehyde resin, which is an important input in the production of MDP, T-HDF and MDF panels. The pressure on costs was lower in 2Q14 and the Company has taken measures that should improve its competitive edge.

Eucatex is widely recognized for its sustainable development practices and was the first company in the industry to obtain ISO 9001 certification, in 2000. It also holds ISO 14001 certification and the Green Seal awarded by the Forest Stewardship Council (FSC), which certifies that its forests are managed in accordance with rigorous environmental, social and economic standards.

used as raw material for producing panels and as biomass for firing its boilers. Total processing capacity is 240,000 metric tons/year, which is equivalent to approximately two million trees, 470,000 cubic meters of standing timber or 1,500 hectares of planted forests. The investment in land and planting to maintain this volume of wood, considering a seven-year cycle, would amount to around $\mathrm{R} \$ 200$ million. Not only does it generate cost benefits, but recycling woodchips also prevents this material from being deposited in local landfills.

## Capital Markets

Eucatex's preferred stock, listed on the BM\&FBovespa under the ticker EUCA4, closed 2Q14 at R\$ 4.44. Eucatex's market capitalization at the end of the period stood at $R \$ 411.2$ million, equivalent to approximately $36 \%$ of its book value.
